If you're looking for a way to extend the lifetime of your digital photos, you can convert from RAW format to JPEG while still maintaining a high-quality image. A good selection tool is essential to creating and editing your images. It's best to create a selection with a combination of a Brush and the Pen tool. To create a circular selection, draw a freeform shape with the Brush tool and use the Direct Selection tool to select a region inside the shape, such as the nose of a face. Now go to Select > Modify > Expand and drag the selection edge until it encloses the entire shape. To select nonconvex shapes, use your Selection tool to make a selection around the object. Then go to Select > Modify > Expand and drag the selection edge until it encompasses the entire shape. If the selected area is larger than the object, you may need to turn off the 3D effect. Use the Burn/Dodge tool to lighten or darken the areas of your image. Adjust the opacity of the color sliders, or background and foreground layer, to change the light or dark areas on the image. ## Merging Layers Layers are important for editing. You can create as many layers as you like, and you can stack them on top of each other to create fine-tuned adjustments. You can use the Layer menu to access the Layers panel. The easiest way to edit your layers is to view them in the Swatches panel (Window menu) or by going to Window > Swatches. You can zoom in and out in the Swatches panel, making it easier to work with the individual layers of your image. In addition to the available sliders and buttons on the Layer panel, there are also five different methods for merging the layers of your image: * Drag and drop the layer to merge it with one or more other layers. * Click the Merge button (it looks like a gear) and then click the layers you want to combine. * Press Alt+Ctrl+G to merge layers. * In the Layers panel, select the layer you want to merge, and then click the Layer menu and choose Merge Visible. * Select the layer(s) you want to merge, right-click or Ctrl+click one of them, and then choose Combine Transparency from the shortcut menu. ## Using the Layers Panel
