ClickOnce On February 6, 2007, Autodesk released ClickOnce, a dynamic application deployment technology. It allows a user to install applications on one or more computers without requiring an existing installation. It does this by making use of a directory structure called a "Publish" folder. This enables a new software product, developed using any of the supported Microsoft.NET languages, to be published to a directory tree on the users' local network. Any files used to deploy the application to the users' computers must be inside the "Publish" folder. In June 2012, Autodesk introduced ClickOnce support in AutoCAD For Windows 10 Crack, Revit, and ArchiCAD. AutoCAD Crack Keygen is now the first mass-market application to utilize this feature. Using ClickOnce, an application can be installed on a user's local system using the AutoCAD application as the first step. The user is then presented with a dialog box to select an installation location for the application, which could be on a network server or the user's own computer. After the selection is made, the user is presented with an option to install the application immediately or save it for later installation. A simplified way to publish a project to AutoCAD for installation on the computer of a network server is to use Remote Desktop Connection and an AutoCAD installation on the server.
