Table of Contents AutoCAD History With the release of AutoCAD 2016, the Autodesk 2016 release of AutoCAD, the program reached 20 years. With the changing design practices and the rise of a service-oriented design, Autodesk, the primary developer of AutoCAD, decided to create AutoCAD 2018 which would finally have robust architectural and engineering tools that would allow the design-build industry to embrace the move towards the service-oriented design. The goal of the release of AutoCAD 2018 was to evolve the software into a service, a shift that would allow engineers and architects to collaborate across desktop, mobile, and cloud platforms, and even provide access to the same set of data regardless of device. At the same time, the developers wanted to make the workflow experience closer to how people actually work. The 2018 release of AutoCAD was launched on September 26, 2016. With AutoCAD 2018, Autodesk brought features that were missing from AutoCAD, including innovative enhancements to CAD tools and improved productivity. The company was committed to creating a more collaborative work experience than ever before. AutoCAD History AutoCAD is developed and sold by Autodesk, a leading software company that develops desktop and mobile design applications for several industries. Autodesk has been developing CAD software since the 1980s, which included the first successful commercial AutoCAD for Windows and AutoCAD LT for DOS. AutoCAD LT was initially released in 1986 for the MS-DOS platform and was the first CAD software application to offer collision detection, drawing resolution (DPI), and context-sensitive help. Before AutoCAD, the CAD industry was operated on a terminal-to-terminal basis, with each operator working independently at a separate graphics terminal. Due to slow graphics terminals and limited memory, many users were forced to move to minicomputers and mainframe computers to run CAD software, and later, to networked computers. Autodesk introduced the first version of AutoCAD in December 1982 for DOS. AutoCAD was a significant update to the then-existing tool, and

AutoCAD also has XML-based, such as: AutoXML: a XML-based data exchange format allowing the exchange of Autodesk CAD data. The AutoXML format is capable of serializing and deserializing complex CAD data models with reduced file size. AutoXML is optimized for the exchange of data between AutoCAD, AutoCAD LT and/or AutoCAD Architecture applications. The data can be exchanged within the Autodesk Exchange Apps (the application store) or it can be exchanged with other applications, such as 3ds Max, Autodesk Fusion 360 or Autodesk Revit. In addition to the XML data exchange, AutoXML allows converting a native AutoCAD file to/from its native XML format.
