What is Summon Stone?

You can directly mount on an Ulti Karapika, Luminaris, or an Oceania and experience the mount effect of the unit alongside you.

Summon Stone is a special enhance effect you can place in the world. When placed within a certain radius of a player, summoned units will call to you, and if you follow them up with a battle, the mounted boost will be applied.

The Cases of Genotypes

Genotypes are tools for describing and classifying the various individuals, such as characters in a CRPG. For example, in Fire Emblem, white hair is denoted by the "W" attribute, while characters in a non-romantic relationship are denoted as "L", "S" and "H" respectively. Various popular games have introduced their own genotypes as well. Therefore, even if the map pieces are not generated, the people in your party will at least have their own Genotype.

For example, "W" might be for the L&H characters, and "H" for the S. This genotype is used to set the players' level appropriately.

The types and power of Genotypes are as follows:

- **Character Genotype [Let'sTakeALook]**
- **Archer Genotype [Let'sTakeALook]**
- **Speech Genotype [Let'sTakeALook]**
- **Superior Character Genotype [Let'sTakeALook]**
- **Wielder Genotype [Let'sTakeALook]**
- **Archetype Genotype [Let'sTakeALook]**

Bowser A unique Character Genotype that is a combination of characteristics from each group. The character class that Bowser belongs to changes depending on the setting, but usually is either a S, W or L. (In Fire Emblem, Bowser's class is correct as the S and W sections are used to denote who can learn the characteristics of the classes.) This is similar to the idea behind the Bless class in Pokémon.
