A: You can't convert it to a 32-bit executable. The only thing you can do is to recompile the binary into a 64-bit executable, but that is a lot of work for a non-commercial game. Your only solution is to remove the 32-bit version, and run a version of Windows that supports all your extensions. Skeletal muscle triglyceride metabolism in critical illness. Low-grade inflammation and metabolic disturbances are hallmarks of prolonged critical illness. Skeletal muscle in critical illness is characterized by reduced fatty acid utilization and increased fatty acid and triglyceride accumulation. This is associated with a shift from mitochondrial to nuclear and, in some cases, glycolytic metabolism. Additionally, exogenous lipid administration in critically ill patients is associated with cardiac dysfunction, highlighting the need to better understand endogenous lipid metabolism in critical illness.Q: React Native - navigator.push() undefined I just started with React Native and thought I might give push a try. But when I call it, I get undefined (this.props.navigation.navigate('Feed')). This is in my App.js. I have my createStackNavigator set up with many screens. In this case Feed is only supposed to appear on the first page, where the user can choose their language. import React from 'react'; import { StyleSheet, Text, View } from 'react-native'; import { createStackNavigator, createAppContainer } from 'react-navigation'; import { createLanguageOptions } from './Language/languageOptions'; import { createLanguage } from './Language/Language'; // import { MaterialCommunityIcons } from '@expo/vector-icons'; class CreateLanguageScreen extends React.Component { render() { return (Create Language); } } const defaultLanguage = 'en-US'; class LanguageRoute extends React.Component { render() {
